PAINESVILLE, OHIO

Please Note:

In the production of a large assortment of hardy plants, the methods of treatment vary a great deal. Certain families of perennials will transplant immediately when dug from the field and transferred to permanent locations in gardens. Then again there are others that are rather hard to handle and they require study as to the best methods for transplanting.

We have experimented with varieties that are ordinarily hard to transplant. Many of these plants you will receive from us, fully established in pots. You will have no difficulty in transplanting this type of material. We went to this added expense of digging these from our fields last fall for the benefit of our customers, without an increase in price.

Please do not misunderstand. Our plants are field grown as in the past. Only those that are hard to transplant you will receive from pots.

Landscape With Perennials

There is always a landscape plan to fit the location in question. Whatever the plans are, we believe hardy plants should be incorporated to enliven the finished planting. Flowers will give the owner a great deal of additional pleasure and added beauty to the landscape. The housewife can also cut beautiful bouquets for her interior decorations.

It is true there are beautiful landscapes made up entirely of Shrubbery. Evergreens, etc. However, if you will view the scenery shown on this page, you cannot help but admit that in addition to the plants being desirable for the location, there are always flowers in abundance, which give the landscape the delicate touch that it has to have.

Our plants are fully developed and will make a fine showing immediately after planting. Our assortment is also large enough to take care of practically any ideas in landscaping. The beauty created by using hardy plants will greatly overcome the price paid in a very short time.

Achilleas are of easy culture and grow in any good garden soil, preferring sunny locations. They are useful for the border, wild garden or shrubbery. For cutting there are many outstanding flowers among the Achilleas for summer floral pieces. In late years it has come to our attention that Achilleas are used in many floral pieces, due to the fact that when a planting of these are maintained and the flowers used continuously they are practically ever-bloomers. Anytime throughout the summer the florist can cut Achilleas for use as fillers. They are very valuable when the Gypsophila or Baby's Breath is off crop.

**CENTAUREA
MACROCEPHELA**

This plant gained prominence at the F. T. D. School in Cleveland. There were large quantities of it used in the making of all types of floral pieces. The flowers are large thistle-like, golden yellow on erect stems. They can easily be worked into almost any floral arrangement and on account of the size of flowers they are very noticeable, in fact in many arrangements they are outstanding. If you will examine the baskets in the picture section in the center of this book you will agree with us that Centaurea are quite valuable and should be grown together with an assortment of hardy flowers.

New Developments in Hardy CHRYSANTHEMUMS

HARDY CHRYSANTHEMUMS were always one of the great specialties in our nurseries. Years back when the assortment was very small, the real hardy varieties were limited to only a few good sorts. The demand was exceptionally good and right now the gardeners are tremendously interested in the new developments.

We, continuously being on the lookout for better things, kept up our plantings with new introductions in Chrysanthemums. After judging these plants in their flowering seasons, we discarded many which did not come up to our satisfaction, keeping for propagation only those varieties that we considered the very best.

Our assortment covers the large flowering types, the mediums and the small buttons together with the single and semi-double flowering types. We are sure you can select from our list any type of Chrysanthemum that will satisfy your liking.

Before offering these, we worked up good quantities of all varieties. This is in line with our policy in offering to the trade the newest developments at reasonable prices. Please note we list both rooted cuttings and pot plants. For the prices we are asking, you cannot afford to be without these new creations. The rooted cuttings are now ready and we will have a steady supply up to June first; pot plants April first on.

California

A. BARRHAM. A beautiful orange bronze and the first variety of this color to come into flower. Shows up wonderfully well under light when used as a decoration. Blooms in October.

BARBARA CUMMING. Very attractive, large, full flower of the Decorative type, over 3 inches across, and clear yellow in color, shading to orange-bronze toward the center. It commences flowering in late August and continues until late October. Vigorous and branchy, attaining 2 feet.

BEATRICE. Beautiful cerise red flowers from 1½ to 2 inches across, on upright tall growing plant, forming mass of bloom in Oct. and Nov. Flowers are intensely double. A distinctive flower well adapted to the fall cut-flower trade.

PINK CUSHION

This is one of the most admired Chrysanthemums. It is a solid compact grower, flowering from first of October until frost. The flowers come continuously throughout the entire fall. The whole clump, while in flower is completely covered.

The color is a beautiful shade of pink. Due to its color and its compact growth we believe at this time there is no other Chrysanthemum as effective in rock garden, landscape or border planting.

CALIFORNIA. This helps to make up the assortment of the better yellow Hardy Chrysanthemums, being single daisy like on attractive long stems. It makes a very desirable sort for late autumn show in a well planned perennial garden. At the same time it can be cut for decoration purposes.

CHAMPAGNE. A bright ruby-red in color. In a planting of Chrysanthemums these are distinct. Flowers are of a good size. Due to their wonderful color they are very desirable.

CRIMSON SPLENDOR. A magnificent and distinct variety producing masses of rich crimson-maroon flowers, intensified with deep garnet tones, and contrasting with a prominent golden yellow center. The flowers are large, fully 4 inches in diameter, with exceptional keeping qualities. Blooms in late September.

DAINTY. The buds are reddish-bronze, while flowers display a touch of pink, single daisy-like. Altogether a simple and beautiful variety, well named.

ALADDIN

The Perpetual Flowering Mum

The flowers are borne on erect stems, the terminal buds giving the first bloom. As the plant develops, the lateral branches make a surprising growth, throwing the lateral and sub-lateral flowers well above the first terminal blooms. The first blooms appear late in July and early August, the color at first being an exquisite warm coppery bronze, with an overlay of orange-apricot shade which deepens in early autumn.

DAZZLER. Brilliant cardinal-red. Fine growing habit. This variety is noticeable from a distance. In a very large percentage of cases it is among the first selected by buyers who like good bright colored Chrysanthemums.

EDEN. Bright rose. This variety makes very attractive pot plants if disbudded and grown for this purpose. In addition to its value as a pot plant we consider this one of the outstanding sorts for landscape effects.

EARLY MORN. Large double shell-pink. For an out-of-doors hardy variety this is one of the choicest for cutting purposes. Flowers are produced on strong erect stems. Will fit into most any floral arrangement.

EMMA MARIE. Large double rich lemon-yellow. Strong grower, very free flowering, maintaining the good bright yellow color far into late autumn.

FERN RIDGE. Single fiery-red with high orange center. This combination makes a beautiful contrast. Strong grower and profuse bloomer. This we believe will become one of the popular single Chrysanthemums. It is very striking.

MURILLO. This variety is not as early as some kinds but is of strong growth and very hardy. It is the best shade of pink among the early hardies.

NELLIE BLAKE. A fine aster flower type. Midseason. Rich reddish-copper. Lasts a long time.

NELLIE KLERIS. Large clear pink. Midseason. Producing the attractive flowers on long stems. This we consider one of the best cut flower varieties.

The stamens are exceptionally long and incurved. It is a strong grower, growing from 2 feet to 30 inches high. The flowers when cut and placed in water will keep in perfect condition for two or three weeks.

Erica or Calluna-Heather**Nice Field Grown**

These plants were never before offered at prices as low as our present quotations. They have always been scarce and high priced. When new material is introduced, we purchase it at a high price and propagate quantities so in turn we can sell to our customers at low prices. In getting our assortment of Ericas together we propagated the hardiest varieties. We have good quantities of all these listed. We hope that you will take special interest in them. They are very beautiful. They are still quite rare and are entirely new to the average garden lover.

On account of their evergreen foliage and some varieties producing flowers from early spring until very late in the fall, they are one of the most desirable plants for edging Rhododendron plantings and placing in rock gardens into semi-shade or full shade. In other words they fit into locations where it is very hard to make the average plant do well. They thrive in almost any type of soil.

The plants we offer are field grown and will average 6 to 8 inches in height, well balanced in their make-up.

Floral Baskets

By Recognized Artists

The Baskets shown on the following pages were produced at the F. T. D. School at the Hollenden Hotel, Cleveland, Ohio, June 23-24, 1933.

We are reproducing them here for their educational value. They show the importance of perennial flowers better than any words can express.

Designs for the New Arrival

In addition to Delphiniums, Centaurea Macrocephala and Statice are responsible for the beauty of this basket. Asparagus Springeri is used for the trimmings.

Funeral Baskinette

Principal flowers are Delphiniums, Centaurea Macrocephala, Gypsophila, Bristol Fairy, and Asclepias Tuberosa. This is a distinct novelty piece. It is worthy of every florist's attention.

PEONIES

It has been said that the Peonies are the poor man's Rhododendron. We believe that they are even more than that. When they are once planted and become established they last for many years. Their deep green foliage is always an ornament in any style of planting. In addition to the foliage, in season the Peonies produce flowers that everyone really admires. They are very easily cared for and it seems that with the years they continue getting better.

A few years ago a planting of Peonies represented a big investment. This we believe slowed up their sales. We never asked high prices for our Peonies, instead we propagated the varieties we paid big money for and produced them in quantities so that we could sell them to our customers at what we consider reasonable prices. There are many Peonies on the market now at ridiculously low prices.

We believe that most of these are dug from neglected fields and are poor in vitality. Such a Peony is too expensive at any price. If a Peony once goes down in vitality it never regains. For the reason that we have cultivated our fields continuously, we now have one of the best assortments in existence and our plants are first class in every respect. Giving this all due consideration, you will find that our prices are very reasonable. Whether you buy small or large quantities you will find our Peonies a real good investment.

In past years it was generally understood that Peonies for success must be planted in the fall. It has been proven that this is not the case. In recent years there have been large plantings of Peonies made in the early spring with complete satisfaction. We ourselves have made spring plantings and found if it is done early they are equal to those planted in the fall season.

Cannas for the Florists

You, no doubt, can recall years ago when Cannas were one of the principle items used for bedding purposes. In spring seasons there were immense quantities sold both in the dry root form and later on in 3 inch pots. In recent years the demand again became very lively for good Cannas and they are now very popular for bedding purposes.

There are many things that can be said in favor of Cannas. After planting, they will make a very quick growth and start flowering in the month of July, continuing until cut down by frosts. After a few freezings, they can be dug, placed in a dry basement and held over until the following spring.

We have selected a short list of desirable varieties, fully covering the color range. These will be ready for shipment any time throughout the winter. If you sell bedding plants, you can purchase these roots from us, pot them into 3 inch pots and develop nice plants. When grown this way, they command a good retail price. By having them in pots, you can also extend your spring selling season, including the month of June. We believe that you will find the Cannas a worthy addition to your list of bedding plants.

Our Canna roots are grown by an expert under proper conditions to produce the very best quality.

Their statement is that these varieties sell regardless of the quantity of Dahlias available.

Our Dahlia roots are grown by a specialist who understands the production of the Dahlia in order to produce clumps from which good strong well-eyed divisions can be made.

*Perennial Plants Bloom Each Year;
Planting Is A Long Time Investment
With Profits From Each New Crop*

In addition to many years of practical experience in the growing and propagating of various perennials, we have in the past and are now devoting a great deal of time to studying uses for our plants. Throughout the entire summer when various large plantings come into full flower, we very carefully examine them. In practically every case at the conclusions of our field inspections, bunches of flowers are cut and brought to our packing house where we have a large assortment of various types of baskets, vases, etc. Greatly enjoying the flowers, we very often arrange them and make nice baskets, selecting color arrangements and suitable material. We take great pleasure in this work. Almost every time a basket is finished it is photographed. We have many photographs of arrangements we made in our own building. You have seen these baskets displayed in our price lists every year which proves beyond question that beautiful pieces can be made with hardy flowers.

Special Rock Garden Offer

\$50.00

● ● ● *Plants of Proven Merit*

In the year 1931 we made our first special offer of rock garden plants. Every fall and spring since then we have sold hundreds of these especially arranged collections consisting of varieties used in our own rock gardens. When we first planted our rock garden we used plants somewhat out of the ordinary. Many of these completely disappeared the first year after planting. Year by year in replacing these varieties, we used more of the better known material. Checking through our rock garden now, we find that the plants which are doing the best are those we have grown for many years in our

northern climate and in their season they make a wonderful showing.

Therefore, if you will purchase this assortment, we are sure you and your customers will find these varieties entirely satisfactory. Growing all our perennials on a large scale enables us to offer to you this selected assortment at a bargain price of \$50.00. All these plants are fully developed and will give good results after planting. If you will check through this catalog you will find that the wholesale value of this assortment will run very much higher. We hope you will take advantage of our special offer; we are sure you will find it very profitable.

SPECIAL SEED OFFERS

On this page and the two following pages we offer the Zinnia and Aster seeds as shown in our complete seed catalog. Asters and Zinnias are among the most popular of all Annuals. For making out general seed orders you will want our complete seed catalog, which we will be glad to send if you do not already have it.

We will have large quantities for shipment from 2 inch pots spring 1936. Our prices will be very reasonable, for our policy is to propagate large quantities and give our customers the advantage of low prices for novelty material.

We are giving you this advance notice so that you will keep these plants in mind. We are sure you will be anxious to get started with this new type of Dianthus. If you are interested before the time for shipping, we will be glad to give you any explanation desired.

Aster Seed

Wilt Resistant and Standard Strains

We have gone to Aster headquarters for our seed and offer these strains to you with complete confidence in their ability to produce well for you. Wherever it was available we are listing the Wilt Resistant strain of each color and variety. In other words, we have reached the conclusion that the Wilt Resistant strains are superior to the Standards and are listing the Standards only when the Wilt Resistant is not yet perfected in that certain color or type. The prices on Wilt Resistants are a little higher, true, but certainly not enough to justify your failing to try them.

Daphne Cneorum

Garland Flower

Daphne works in well with perennials. Since rock gardening is so popular, there are many being used with assortments of hardy plants. The nature of Daphne is a dwarf bushy plant forming a broad mat of wiry almost prostrate stems covered with dark green leaves, each stem tipped with a dense cluster of rose-pink deliciously fragrant flowers in May and August. Without question it is one of the most beautiful little early flowering shrubs. Since the plants are available in quantity this plant should be included in practically all types of gardening.

SHIPPING FACILITIES EXCELLENT

In every case, shipments will go forward as quickly as possible if so desired, or reserved for shipment in proper time for planting in your districts. The first of March we start shipping into the Southern States, following up with our shipments in the later Spring seasons to our mid-western and eastern states. This part we watch very closely. It is our aim to ship you the plants, when it is planting time in your locality. Our railroad connections are of the very best, being able to route through our terminals immediately when shipments are received by the railroad. Perennials are of perishable nature and should be shipped by express, unless the material is of extra heavy nature and in perfect dormant stage at the time of shipment.

METHOD OF PACKING

This part of the work is very important. In every case the perennials must be packed according to its nature. Therefore our packing is handled by our most experienced men. They are fully acquainted with all varieties of plants that we grow and pack accordingly. In the large volume of business annually, we receive only an occasional complaint on shipments being received, either heated in transit or improperly packed. In following up these complaints, we find in many cases that such shipments are either delayed in transit or traveling through unfavorable weather conditions. This, however, is so trifling when taking into consideration our thousands of shipments that our packing methods are as perfect as possible. In the event of plants arriving in unsatisfactory condition, we are ready at all times to cover such plants with replacement or refund of price paid.

ADJUSTMENT OF COMPLAINTS

Complaints for adjustment must be mailed to us in writing immediately upon arrival of stock.
